

Q4 2023 Financial Results

February 15, 2024

Agios conference call participants

TOPIC	PARTICIPANT
Introduction	Chris Taylor, VP Investor Relations and Corporate Communications
Business Update	Brian Goff, Chief Executive Officer
R & D Update	Sarah Gheuens, M.D., Ph.D., Chief Medical Officer, Head of Research and Development
Commercial Update	Tsveta Milanova, Chief Commercial Officer
Fourth Quarter 2023 Financial Results	Cecilia Jones, Chief Financial Officer
Q&A	Mr. Goff, Dr. Gheuens, Ms. Milanova, Ms. Jones

Forward-looking statements

This presentation and various remarks we make during this presentation contain forward-looking statements within the meaning of The Private Securities Litigation Reform Act of 1995. Such forward-looking statements include those regarding the potential benefits of PYRUKYND® (mitapivat), AG-946, AG-181, and TMPRSS6 siRNA; Agios' plans, strategies and expectations for its preclinical, clinical and commercial advancement of its drug development, including PYRUKYND®, AG-946 and its PAH stabilizer; Agios' strategic vision and goals, including its key milestones for 2024 and potential catalysts through 2026; and the potential benefits of Agios' strategic plans and focus. The words "anticipate," "expect," "goal," "hope," "milestone," "opportunity," "plan," "potential," "possible," "strategy," "will," "vision," and similar expressions are intended to identify forward-looking statements, although not all forward-looking statements contain these identifying words. Such statements are subject to numerous important factors, risks and uncertainties that may cause actual events or results to differ materially from Agios' current expectations and beliefs. For example, there can be no guarantee that any product candidate Agios is developing will successfully commence or complete necessary preclinical and clinical development phases, or that development of any of Agios' product candidates will successfully continue. There can be no guarantee that any positive developments in Agios' business will result in stock price appreciation. Management's expectations and, therefore, any forward-looking statements in this presentation and various remarks we make during this presentation could also be affected by risks and uncertainties relating to a number of other important factors, including, without limitation: risks and uncertainties related to the impact of pandemics or other public health emergencies to Agios' business, operations, strategy, goals and anticipated milestones, including its ongoing and planned research activities, ability to conduct ongoing and planned clinical trials, clinical supply of current or future drug candidates, commercial supply of current or future approved products, and launching, marketing and selling current or future approved products; Agios' results of clinical trials and preclinical studies, including subsequent analysis of existing data and new data received from ongoing and future studies; the content and timing of decisions made by the U.S. FDA, the EMA or other regulatory authorities, investigational review boards at clinical trial sites and publication review bodies; Agios' ability to obtain and maintain requisite regulatory approvals and to enroll patients in its planned clinical trials; unplanned cash requirements and expenditures; Agios' ability to obtain, maintain and enforce patent and other intellectual property protection for any product candidates it is developing; Agios' ability to establish and maintain key collaborations; uncertainty regarding any milestone or royalty payments related to the sale of Agios' oncology business or its in-licensing of TMPRSS6 siRNA, and the uncertainty of the timing of any such payments; uncertainty of the results and effectiveness of the use of proceeds from the transaction with Servier; competitive factors; and general economic and market conditions. These and other risks are described in greater detail under the caption "Risk Factors" included in Agios' public filings with the Securities and Exchange Commission. Any forward-looking statements contained in this presentation and various remarks we make during this presentation speak only as of the date hereof, and Agios expressly disclaims any obligation to update any forward-looking statements, whether as a result of new information, future events or otherwise, except as required by law.

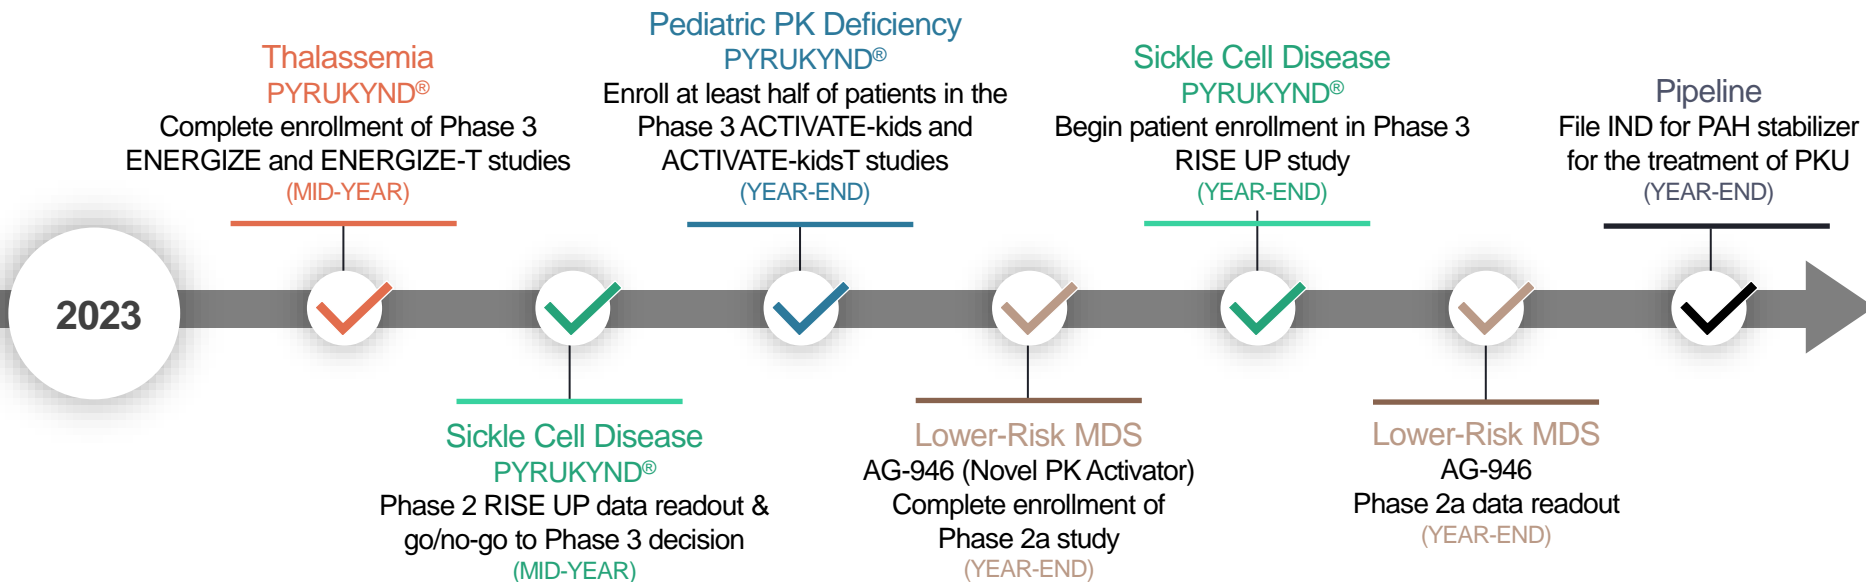

Business Overview

Brian Goff
Chief Executive Officer

Momentum building as we delivered on all 2023 goals

Evaluate business development opportunities to expand pipeline and build commercial capabilities to efficiently launch additional indications

Pipeline

License Agreement with Alnylam for novel siRNA for potential treatment of PV (Q3 2023)

Continuing clinical and regulatory milestone momentum into 2024, with two Phase 3 data readouts

2024

EARLY

Thalassemia
PYRUKYND®

Phase 3 data readout for
ENERGIZE study
(COMPLETED)

Pipeline

Begin Phase 1 dosing for
AG-181 (PAH stabilizer)
for the treatment of PKU

MID-YEAR

Thalassemia
PYRUKYND®

Phase 3 data readout for
ENERGIZE-T study

Pediatric PK Deficiency
PYRUKYND®

Complete enrollment Phase 3
ACTIVATE kids study

Lower-Risk MDS

AG-946 (Novel PK Activator)

Begin patient enrollment of
Phase 2b study

YEAR-END

Thalassemia
PYRUKYND®

Filing for FDA Approval

Sickle Cell Disease
PYRUKYND®

Complete Phase 3 enrollment

Pediatric PK Deficiency
PYRUKYND®

Phase 3 data readout
ACTIVATE kids-T study

PYRUKYND® expansion into diseases with larger patient populations provides significant near-term growth potential for first- and best-in-class therapies

3-8K patients
in the U.S./EU5

PK deficiency **2022**

Approved for adults in the U.S., EU and Great Britain

OUR GOAL
Deliver the first
approved therapy for
pediatric PK deficiency

18-23K patients
in the U.S./EU5

~70K patients in GCC

>1M patients worldwide

Thalassemia **2025**

Potential U.S. approval

OUR GOAL
Deliver the first therapy
approved for all thalassemia
subtypes

120-135K patients
in the U.S./EU5

~150K patients
in GCC

>3M patients
worldwide

Sickle cell disease **2026**

Potential U.S. approval

OUR GOAL
Deliver a novel oral therapy
that improves anemia and
reduces VOCs

Strong beginning of 2024 with positive Thalassemia Phase 3 ENERGIZE readout; four additional Phase 3 readouts expected by the end of 2025

2024	2025	2026
 Thalassemia PYRUKYND® Phase 3 ENERGIZE readout (completed)	Sickle Cell Disease PYRUKYND® Phase 3 RISE UP readout	Sickle Cell Disease PYRUKYND® Potential approval
Thalassemia PYRUKYND® Phase 3 ENERGIZE-T readout	Thalassemia PYRUKYND® Potential approval	Pediatric PK Deficiency PYRUKYND® Potential approval
Pediatric PK Deficiency PYRUKYND® Phase 3 ACTIVATE kids-T readout	Pediatric PK Deficiency PYRUKYND® Phase 3 ACTIVATE kids readout	

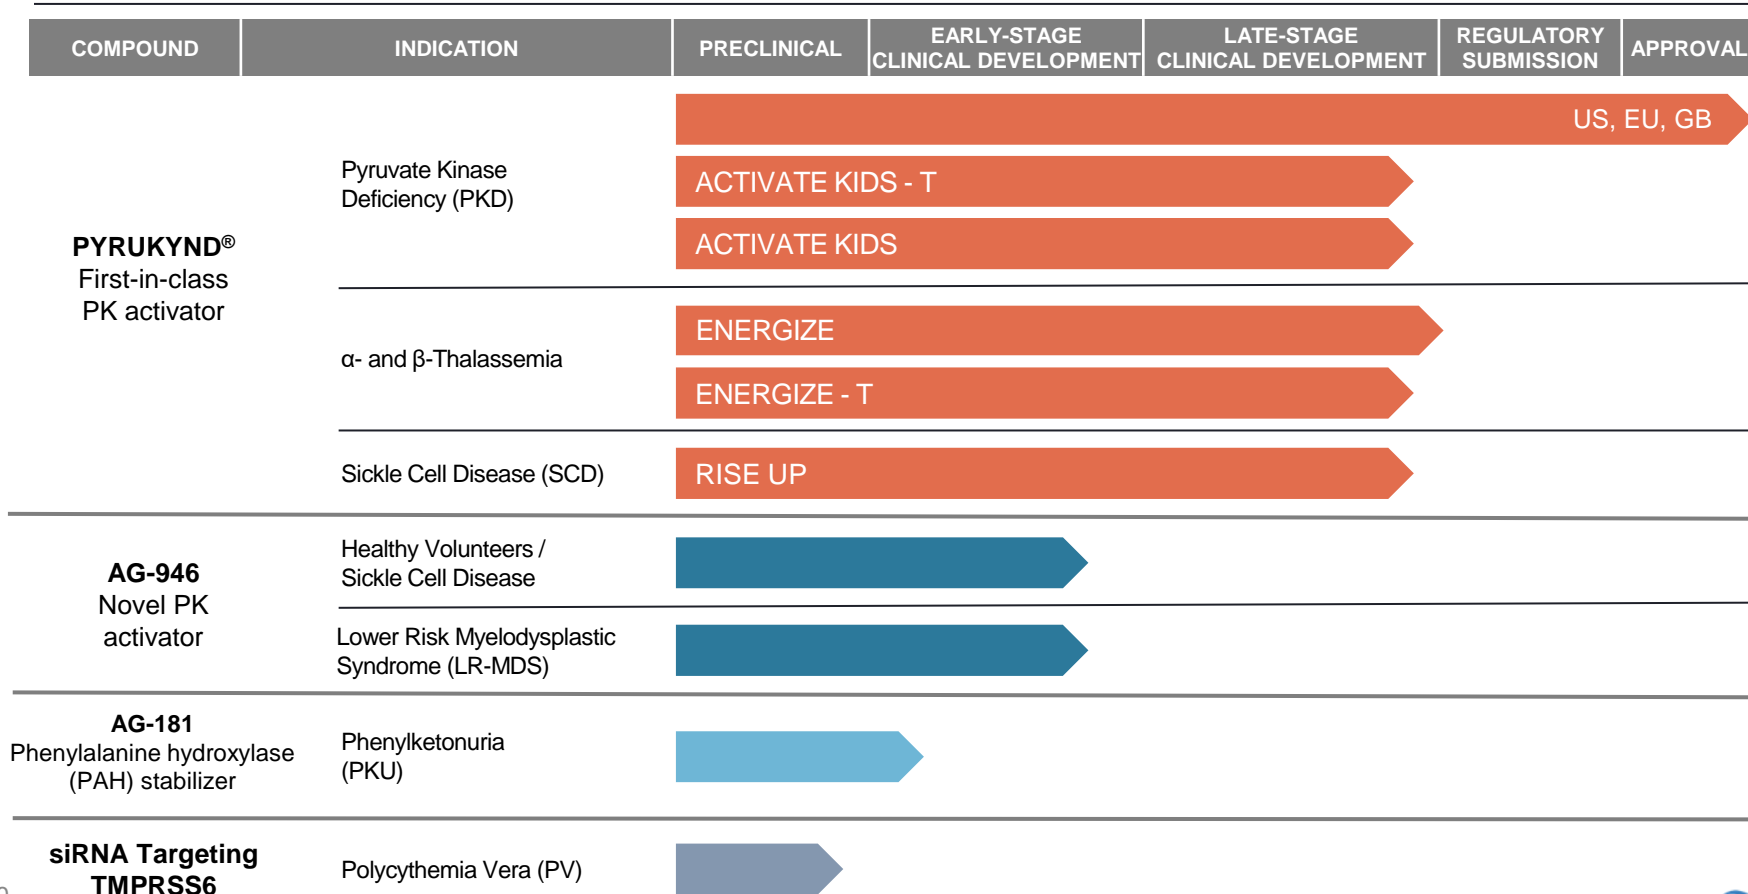

Clinical Overview

Sarah Gheuens, M.D., Ph.D.
Chief Medical Officer, Head of Research and Development

Significant advancement building depth and breadth in our rare disease pipeline

Fueling growth beyond 2026, an early-stage pipeline addressing the underlying pathophysiology of rare diseases with high unmet need

Lower-Risk MDS

~75-80k patients in the U.S. and EU5

No oral therapy addresses ineffective erythropoiesis

40% Achieved Transfusion Independence endpoint in open-label Phase 2a study

Expect to initiate Phase 2b study of AG-946 in mid-2024

Phenylketonuria (PKU)

~35-40k patients in the U.S. and EU5

Limited treatment options; patients consume high restricted diet

IND filed December 2023

Expect to initiate Phase 1 study of AG-181 in early 2024

Polycythemia Vera (PV)

~100k patients in the U.S.

Phlebotomy is the standard of care

In-licensed siRNA from Alnylam in 2023

Advancing to pre-IND studies

PYRUKYND: a novel oral therapy with potential to be best-in-class improving anemia, reducing SCPCs and improving how patients feel and function

Phase 2 Data

- **Statistically significant increase in hemoglobin response rate** observed in both doses compared to placebo
- **Improvements in markers of hemolysis and erythropoiesis** observed at both doses compared to placebo
- A **trend in sickle cell pain crises reduction** was observed at both doses compared to placebo
- No adverse events (AEs) leading to discontinuation

Phase 3 Design⁽²⁾

- **Phase 3 primary endpoints:** Hb response⁽³⁾ and annualized rate of SCPCs
- **N = 198** with a 2:1 randomization (100 mg mitapivat and placebo)
- **52-week** double blinded period followed by 216-week open label extension

PYRUKYND

- Seamless Phase 2/3 global study **designed with community input**
- Potential for mitapivat to:
 - **improve anemia**
 - **reduce sickle cell pain crises**
 - **improve how patients feel and function**
- Expected data readout in 2025
- Potential US **launch in 2026**

Abbreviations: BID = twice daily; Hb = hemoglobin; SCPC = sickle cell pain crises

(1) 100mg was selected for Phase 3 portion of the study

(2) Phase 2 and phase 3 components are part of a single study/protocol

(3) Hb response is defined as a ≥ 1.0 g/dL increase in average Hb concentration over Weeks 24–52 compared with baseline

Sickle Cell Disease remains an area of significant need for innovative therapies that can demonstrate meaningful benefits beyond hemoglobin increase

Disease Overview

Genetic blood disorder that causes **sickling of red blood cells**

Caused by mutations in HBB gene leading to **anemia, hemolysis and sickle cell pain crises**

Market Opportunity

No novel oral therapy **improves anemia and reduces sickle cell pain crises (SCPC)**

Significant global opportunity
~**100,000** patients in the U.S.
>**3 million** worldwide

Lifelong impact on SCD patients

~45 years

Average life expectancy

~10%

Deaths from renal impairment

~24%

Patients have a stroke by 45 years of age

Agios aims to deliver the first therapy approved for all thalassemia subtypes

Mitapivat Thalassemia Phase 3 program

ENERGIZE

- Alpha- and Beta-thalassemia Non-transfusion dependent patients
- Primary endpoint: Hemoglobin (Hb) response
- Data announced January 2024

Mitapivat Thalassemia Phase 3 program

ENERGIZE-T

- Alpha- and Beta-thalassemia Transfusion dependent patients
- Primary endpoint: Transfusion Reduction Response
- Data readout mid-2024

ENERGIZE: achieved significance across both primary and all key secondary endpoints

Key findings in ENERGIZE trial

- Total of **194 patients** were randomized 2:1 to 100 mg mitapivat (n=130) or placebo (n=64)
- **Statistically significant increase in hemoglobin response rate (42.3%)** compared to patients on placebo (1.6%)
- Statistically significant change from baseline in **average FACIT-Fatigue score and average hemoglobin concentration**
- During the 24-week double-blind period, 4 subjects in the mitapivat arm experienced adverse events (AEs) leading to discontinuation; no AEs in the placebo arm leading to discontinuation
- All pre-specified subgroup analyses favored the mitapivat treatment arm compared to placebo

Next Steps

- Full data set to be presented at an upcoming medical meeting
- ENERGIZE T readout expected by **mid-year**
- Data to be submitted together to FDA **by year end**
- Potential US **launch in 2025**

Thalassemia ENERGIZE results

- Statistically significant increases in hemoglobin response rate and change from baseline in average hemoglobin concentration
- Statistically significant change from baseline in average FACIT-Fatigue score (Patient Reported Outcome, PRO)
- Rapid enrollment, high completion and rollover rates

Implications for Mitapivat

- **Mitapivat has potential to be the first therapy that improves hemoglobin and makes patients with thalassemia feel better**
- **Clinicians** appreciate the potential longer-term benefits of reducing markers of hemolysis
- Potential to reduce high rate of serious morbidities, including thrombosis and premature death, in the real world
- Potential for significant commercial adoption

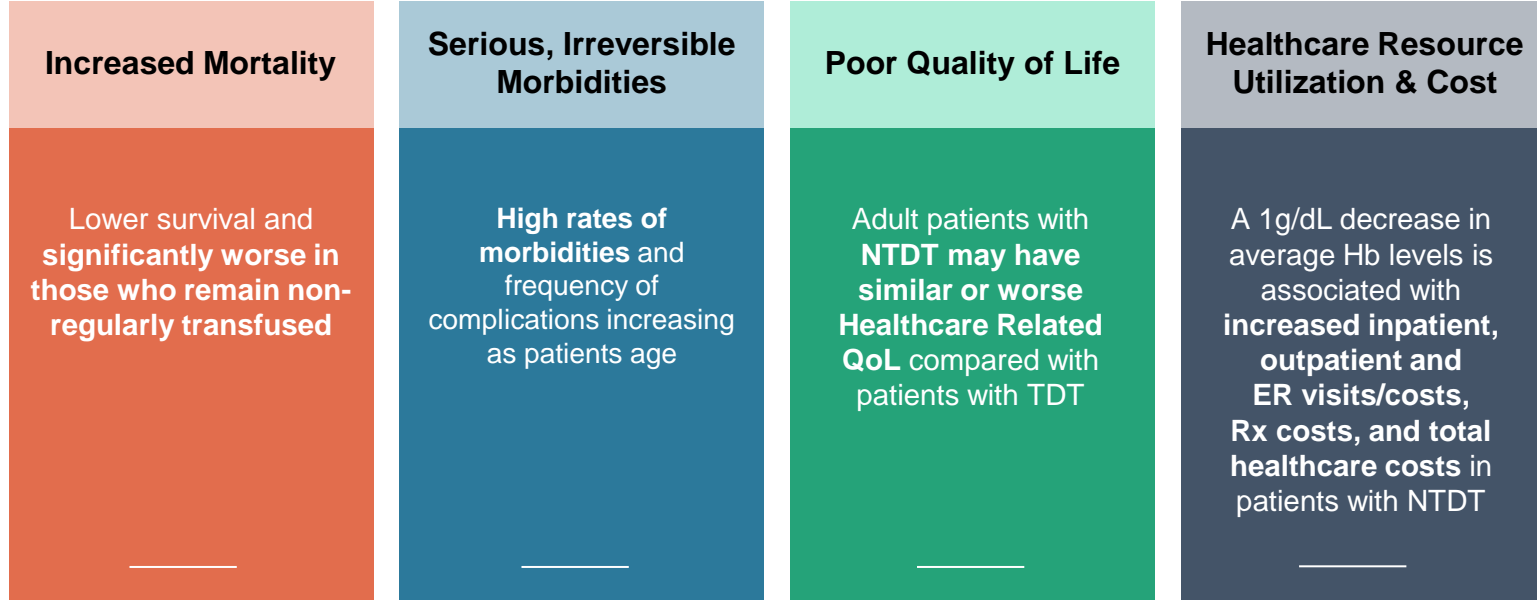

Commercial Overview

Tsveta Milanova
Chief Commercial Officer

Thalassemia remains an area of high unmet need with few treatment options and significant burden of disease regardless of transfusion needs

NTDT = non-transfusion dependent thalassemia; TDT = transfusion dependent thalassemia

Source: Musallam, K, et al.. 2022. Hemasphere 6(12) e806;Thalassemia International Federation, 2023; Musallam, K, et al., 2021. PYRUKYND® has the potential to become the first therapy approved for all thalassemia subtypes

Approved treatment in US*	✗	✗	✗	✓
PYRUKYND potential label	✓	✓	✓	✓

Strong alignment with trial sites, key centers for thalassemia patients across US

Patient prevalence heatmap alongside Agios trial sites and /or Centers of Excellence (COE)

Availability of **newborn** Thalassemia **screening**

Well established **ICD-10** codes in **Thalassemia**

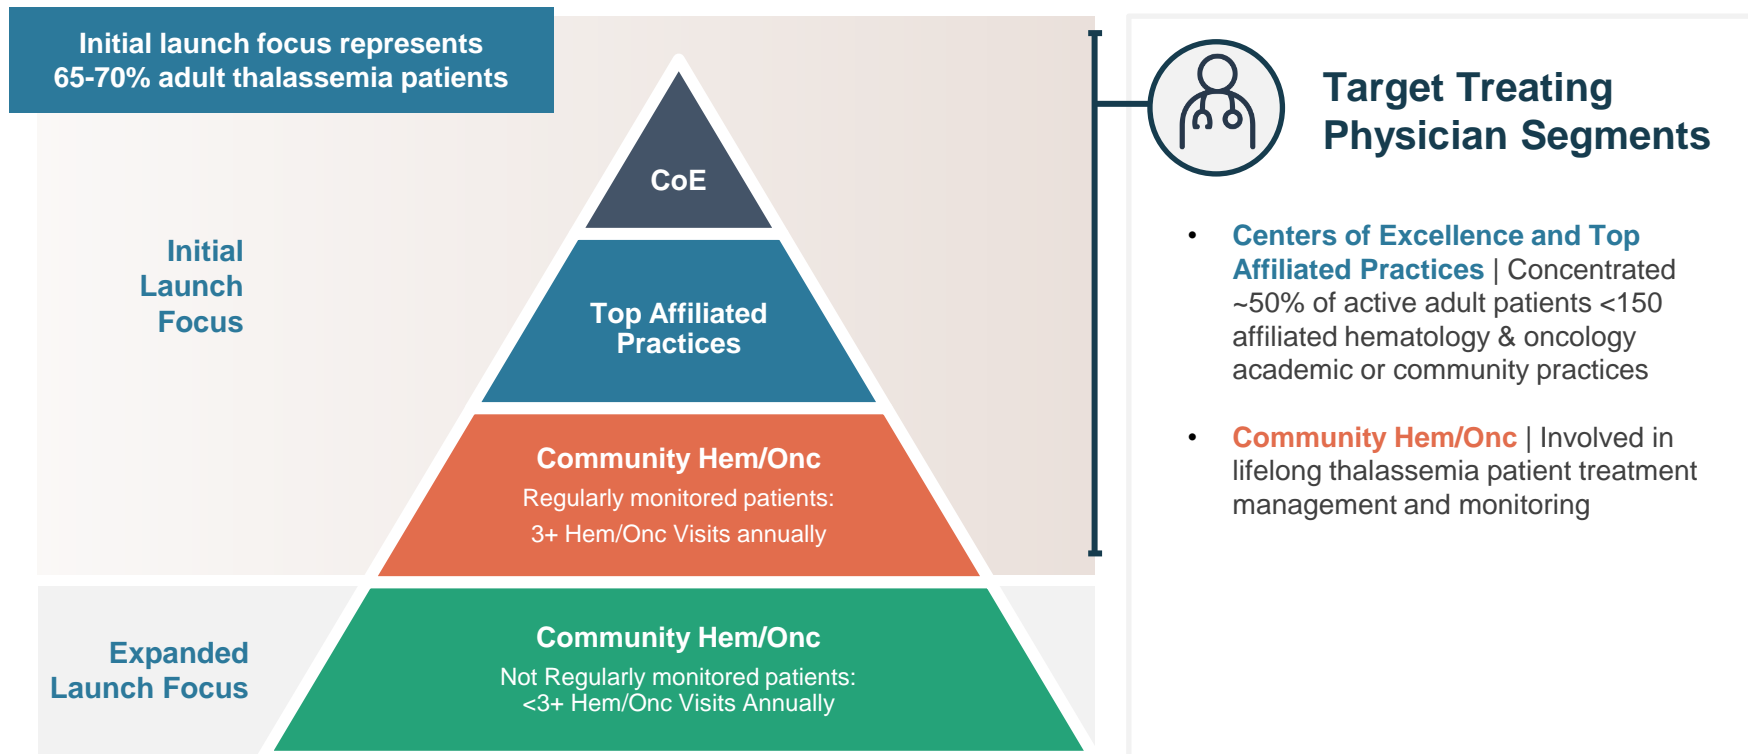

Agios trial sites aligned to key Health Care Providers and Centers of Excellence

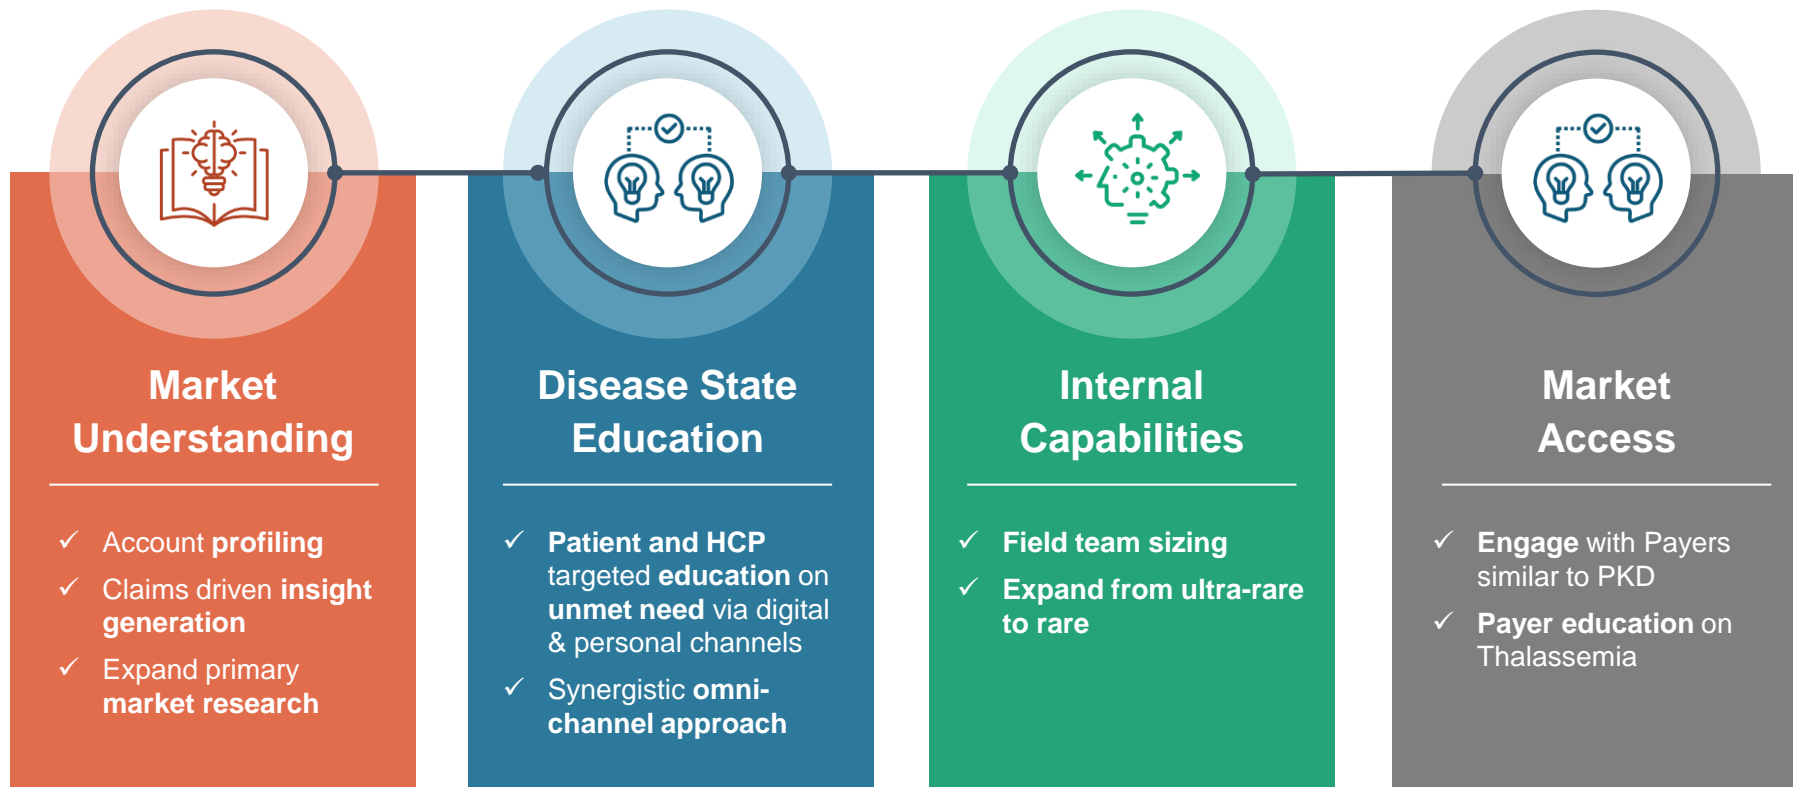

Good coverage with Centers of Excellence, but community plays a strong role

Concentration of treating physicians facilitates initial PYRUKYND[®] launch plan

Strengthening our commercial capabilities to support Thalassemia launch in a meaningfully larger patient population

PYRUKYND® Q4 2023 performance metrics highlight continued progress

\$7.1M net U.S. sales of PYRUKYND®

\$26.8M in 2023, from \$11.7M in 2022

109 patients on PYRUKYND®,
which includes new prescriptions and those
continuing treatment (9% increase from Q3)

**Patients on therapy represent
broad demographic range;**
consistent with the adult PK deficiency
population

**178 unique patients completed
PYRUKYND® prescription
enrollment forms,**
a 11% increase over Q3 2023

**Unique prescriber base of 154
physicians,** diversified across the
country, a 8% increase over Q3 2023

PYRUKYND® expansion into diseases with larger patient populations provides significant near-term growth potential for first- and best-in-class therapies

3-8K patients
in the U.S./EU5

PK deficiency **2022**

Approved for adults in the U.S., EU and Great Britain

OUR GOAL
Deliver the first
approved therapy for
pediatric PK deficiency

18-23K patients
in the U.S./EU5

~70K patients in GCC

>1M patients worldwide

Thalassemia **2025**

Potential U.S. approval

OUR GOAL
Deliver the first therapy
approved for all thalassemia
subtypes

120-135K patients
in the U.S./EU5

~150K patients
in GCC

>3M patients
worldwide

Sickle cell disease **2026**

Potential U.S. approval

OUR GOAL
Deliver a novel oral therapy
that improves anemia and
reduces VOCs

Financial Overview

Cecilia Jones
Chief Financial Officer

Fourth quarter and full year 2023 financial results

Statement of Operations	Three Months Ended 12/31/23	Three Months Ended 12/31/22	Year Ended 12/31/23	Year Ended 12/31/22
PYRUKYND® Net Revenue	\$7.1M	\$4.3M	\$26.8M	\$11.7M
Cost of Sales	\$0.6M	\$0.4M	\$2.9M	\$1.7M
Research & Development Expense	\$77.5M	\$70.3M	\$295.5M	\$279.9M
Selling, General & Administrative Expense	\$35.3M	\$32.8M	\$119.9M	\$121.7M
Gain on Sale of Contingent Payments (TIBSOVO® Royalties)	--	\$127.9M	--	\$127.9M

Cash, Cash Equivalents and Marketable Securities	\$806.4M	\$1.1B

Closing Remarks

Brian Goff
Chief Executive Officer

Well-positioned with multiple near-term catalysts to enter multi-billion-dollar markets and deliver significant value

PKa franchise with multi-billion-dollar potential

Large opportunities with substantial value - potential for two additional **first and best-in-class** indications for PYRUKYND[®] by 2026

Differentiated mechanism of action

Clearly differentiated PK activation franchise targeting red blood cell health **beyond hemoglobin** increase

Increasing probability of success

Proven track record supported by **compelling and consistent data** to date

Growing pipeline

Diversified pipeline addressing the underlying pathophysiology of **rare diseases with high unmet need**

\$806.4M in cash and equivalents as of December 31, 2023

Retained economics related to vorasidenib include \$200M milestone upon FDA approval and 15% royalty on net US sales

Thank You

Appendix

PYRUKYND[®]: first Phase 3 program to encompass full range of thalassemia patients

ENERGIZE

Open-label extension (up to 5 years)

Primary endpoint

- Mean Hb ↑
≥ 1 g/dL from baseline

Secondary endpoints

- Fatigue, additional measures of Hb ↑, hemolysis, patient-reported outcomes, physical activity, iron metabolism, safety, PK/PD

Key inclusion criteria

- ≥ 18 years
- β -thalassemia \pm α -globin mutations, HbE β -thalassemia, or α -thalassemia (HbH disease)
- Non-transfusion-dependent defined as ≤ 5 RBC units during the 24-week period before randomization and no RBC transfusions ≤ 8 weeks prior
- Hb ≤ 10.0 g/dL

ENERGIZE-T

Open-label extension (up to 5 years)

Primary endpoint

- 50% reduction in transfusion burden in any 12-week rolling period

Secondary endpoints

- Additional measures of transfusion reduction, safety, PK/PD

Key inclusion criteria

- ≥ 18 years
- β -thalassemia \pm α -globin mutations, HbE β -thalassemia, or α -thalassemia (HbH disease)
- Transfusion-dependent defined as 6 to 20 RBC units transfused and ≤ 6 -week transfusion-free period during the 24-week period before randomization

- Total of 194 patients were randomized 2:1 to 100 mg mitapivat (n=130) or placebo (n=64)
- Hemoglobin response is defined as ≥ 1.0 g/dL (10 g/L) increase in average Hb concentrations from Week 12 through Week 24 compared with baseline.
- **Treatment with mitapivat demonstrated a statistically significant increase in hemoglobin response rate compared to placebo**

Primary Endpoint	Placebo N=64	Mitapivat 100 mg BID N=130
Hemoglobin responders, n (%)	1 (1.6)	55 (42.3)
Adjusted difference of response rate (Mitapivat-Placebo), %		40.9
95% CI		(32.0, 49.8)
2-sided p-value		<0.0001

Abbreviations: RBC = red blood cell; Hb = hemoglobin. Subjects who do not have at least 2 on-treatment Hb concentration assessments between Week 12 and Week 24 are considered non-responders. Baseline is defined as the average of all assessments within 42 days before randomization for subjects randomized and not dosed or within 42 days before the start of study treatment for subjects randomized and dosed.

Hb concentrations assessed within 8 weeks after an RBC transfusion are excluded from the baseline derivation and from the analysis.

The estimated adjusted difference in response rate, 95% CI and p-value are based on Mantel-Haenszel stratum weighted method adjusting for the randomization stratification factors.

Key secondary endpoints: change from baseline in both hemoglobin concentration and FACIT-Fatigue Score

- Change from baseline in average FACIT-Fatigue (Functional Assessment of Chronic Illness Therapy-Fatigue) subscale score from Week 12 to Week 24
- Change from baseline in average hemoglobin concentration from Week 12 to Week 24
- **Treatment with 100 mg mitapivat demonstrated statistically significant improvements on both key secondary endpoints compared to placebo**

Safety

- Overall, incidence of adverse events was similar across mitapivat and placebo arms.
- During the 24-week double-blind period, 4 (3.1%) subjects in the mitapivat arm experienced adverse events (AEs) leading to discontinuation; there were no AEs in the placebo arm leading to discontinuation

Advancing RISE UP Phase 3 Study of PYRUKYND[®] in sickle cell disease with expected readout in 2025

Phase 3 primary endpoints⁽¹⁾:

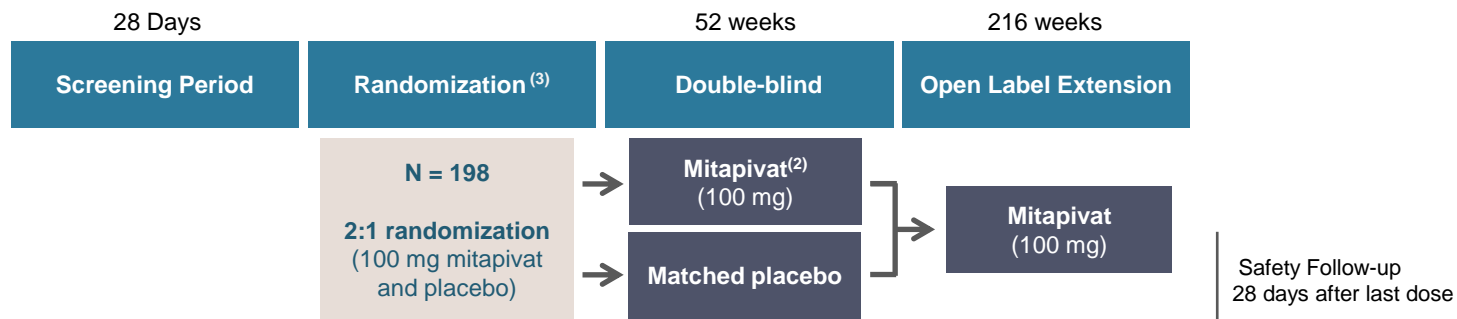

Hb response, defined as a ≥ 1.0 g/dL increase in average Hb concentration over Weeks 24–52 compared with baseline, and annualized rate of SCPCs

Key inclusion criteria

- ≥ 16 years of age
- Documented SCD (HbSS, HbSC, HbS β 0/HbS β + thalassemia, other SCD variants)
- Recurrent VOCs (vaso-occlusive crises) – defined as the occurrence of 2–10 SCPCs (acute pain needing medical contact, acute chest syndrome, priapism, hepatic or splenic sequestration) in the prior 12 months
- Anemia – defined as a Hb level of 5.5–10.5 g/dL
- If taking HU, the dose must be stable for ≥ 90 days before starting study drug

Key exclusion criteria

- Receiving regularly scheduled blood transfusions
- Severe kidney disease or hepatobiliary disorders
- Currently receiving treatment with SCD therapies (excluding HU)
- Prior exposure to gene therapy, or prior bone marrow or stem cell transplantation

Abbreviations: BID = twice daily; Hb = hemoglobin; SCPC = sickle cell pain crises; HU = hydroxyurea

⁽¹⁾ Phase 2 and phase 3 components are part of a single study/protocol; ⁽²⁾ Patients who receive mitapivat in the double-blind period will continue to receive the same dose of mitapivat in the open-label extension period;

⁽³⁾ Randomization stratification factors: Number of SCPCs in the prior year (< 5 , ≥ 5), hydroxyurea use (yes, no).

Treatment with mitapivat demonstrated a statistically significant increase in hemoglobin response rate compared to placebo

	Placebo N=27	Mitapivat 50 mg BID N=26	Mitapivat 100 mg BID N=26
Hemoglobin responders, n (%)	1 (3.7)	12 (46.2)	13 (50.0)
Difference of response rate (Mitapivat-Placebo), %		42.5	46.3
95% CI⁽¹⁾		(18.8, 63.4)	(22.0, 66.8)
2-sided p-value⁽²⁾		0.0003	0.0001

Abbreviation: RBC = red blood cell

Hemoglobin response is defined as ≥ 1.0 g/dL (10 g/L) increase in average Hb concentrations from Week 10 through Week 12 compared to baseline.

Assessments collected within 8 weeks after an RBC transfusion are excluded from the analysis.

Subjects who do not have any Hb concentration assessments from Week 10 through Week 12 are considered nonresponders.

(1) Exact 95% CI

(2) The p-value is based on the Fisher's exact test

Annualized rates of sickle cell pain crises for patients in the mitapivat arms were lower compared to patients in the placebo arm

CRC Adjudicated Data

Negative Binomial Regression Model

	Placebo N=27	Mitapivat 50 mg BID N=26	Mitapivat 100 mg BID N=26
Annualized Rate of SCPC	1.71	0.83	0.51
95% CI	(0.95, 3.08)	(0.34, 1.99)	(0.16, 1.59)
Rate ratio (Mitapivat/Placebo)		0.48	0.30
95% CI		(0.17, 1.39)	(0.08, 1.07)

Abbreviations: CRC = crisis review committee; SCPC = sickle cell pain crisis

The estimates and 95% CIs are based on a negative binomial regression model with natural log link. The model included the number of SCPC events during the Double-blind Period of the study as the response variable and treatment arm as the independent variable. The natural log of time on study was used as the offset to account for the varying lengths of subjects' time in the Double-blind Period of the study.

SCPC events that occur within 7 days of a prior SCPC onset are not counted as a separate event. Each subject time in the Double-blind Period is defined as (end date – date of randomization + 1), where end date is last dose of study drug during the Double-blind Period for subjects randomized and dosed, or the randomization date for subjects randomized and not dosed.
